

## Driving Test Success Anytime System & Device Recommendations

Supports any device / operating system / web browser providing a full implementation of the HTML5 standard.

Hazard Perception tests are not currently compatible with iOS on the iPhone owing to the way iOS handles video playback on phone-sized devices. Owing to differences in performance and implementation of the HTML5 standard, not all features can be guaranteed to work on all permutations of hardware, operating system and browser.

Note that browsers that do not fully implement the HTML5 standard will still work, but may not work in all respects.

Driving Test Success Anytime includes streamed video. The quality of the video playback may vary according to available bandwidth. A minimum of a 2.5Mbps connection is required for smooth video playback.

Please note: when viewing the video files for the hazard perception and practical driving lessons, a considerable amount of bandwidth can be consumed. Therefore we strongly recommend that if you are revising on a mobile device, you restrict yourself to a WiFi connection where available, to avoid incurring 3G or 4G data charges from your provider.

If you do encounter any difficulties or need any help whilst using Driving Test Success Anytime, please contact us at [support@drivingtestsuccess.com](mailto:support@drivingtestsuccess.com).
